

EuroSpaPoolNews.COM

You are the Champions !

Readers of our newsletters, you are Champions of responsiveness! According to the latest e-mail marketing* barometer which rates the efficiency of emailing in the press, the number of individual click-to-open visitors of our newsletters is more than double the average generally attained by press publications. Indeed, the response statistics add up to around 42%, against an average of 19.51%. In addition, the statistics showing the display of our news or new product pages have increased considerably, including those of the eight languages pages of our website. Proof, if any is needed, of the relevance and rapidity of our posts, greatly appreciated by Pool and Spa Professionals all over the world! Professional friends, we owe you a big thank you!

iPool2013 ON NOW ! International Pool Contest on the Internet

The great iPool 2013 competition opened on 30th March. So you can now upload from 1 to 5 photographs of private outdoor pools that you created, to take part in the "most beautiful pool" contest, to be elected by voters online. Registration is to be done exclusively through the www.eurospapoolnews.com site, by creating your account with your username and password.

To participate in the voting for the prize, simply fill out the registration form online via the www.eurospapoolnews.com site with a valid e-mail address before 31st July 2013, 11:59 p.m. (23:59 hours). The voter can then select its favourite photos.

The second stage of the competition consists of selecting the two photographs per country that earned the most votes to be resubmitted for selection to users in the finals that will take place from 12th August to 1st October 2013.

The Grand Prize Winner will be the one whose photo received the highest number of votes. The sole winner will receive the iPool2013 Trophy, created by Didier Cassini, in partnership with Opiocolor, an iPhone and a year-long advertising campaign on PiscineSpa.com and EuroSpaPoolNews.com's media supports worth €10,000.00, ex VAT.

The award ceremony will take place at the Salon Piscina in Barcelona from 15th to 18th October 2013.

The iPool2012 competition was a resounding success! Indeed, this internet rendezvous generated more than 10,000 visits per month, recorded 60 participants from 9 countries and attracted 150 magnificent pool pictures. The winner of this first edition, the Ukrainian company LLC WATER WORLD WINDOW, received its iPool2012 trophy at the Piscine exhibition in Lyon.

LEADER POOL enhances its international coverage

The French company **Leader Pool Diffusion** is widening its international network, building on its presence in Canada, Greece and the Netherlands and branching out into the Middle East market through a manufacturer called Oasis Dream, which has created a 32 x 12 m pool in the sand (just ten metres from the sea) on Nurai Island opposite Abu Dhabi. The technology used is the fruit of over 30 years' experience in the construction and swimming pool industries. It is based on a blend of materials such as special flexible galvanised sheet steel profile, triangular beams all measuring 20 cm (rigidity, wall stability, linking with the two upper and lower concrete wall-ties), continuous and well-positioned reinforcement, galvanised grid inside the pool (eliminating microcracks, visibility of the cast concrete, outstanding adhesion of casing coating). The design ensures the single-form pool (bottom + walls + possible entry beach) never suffers from movement. Today, this process is increasingly used for large public pools.

SMART REVERSE extends the life of chlorinator's cells

In 2013, the **POOLSQUAD** electrolyser acquires a feature that is exceptional on the market: the **SMART REVERSE**. The device continuously measures the hardness of the water through an innovative technology that led to the filing of a patent. The hardness measured is used to determine optimum inversion time: short enough to prevent scale deposits in the electrolysis cell and long enough to protect it from premature wear. The lifespan of the electrolytic cell is thus significantly increased. The electrolyser still has the advanced features that earned it the POOL ECO ATTITUDE 2010 trophy: chlorine production that is impervious to temperature or wear of the cell, progressive polarity reversal with memory, predictive pH regulation that saves on corrective products, a «low mode» protection or «super chlorination», wintering and automatic reactivation, self-diagnosis to verify proper functioning, a

record of events for the month, an interactive interface with a choice of 10 languages, a pH sensor with an amazing lifespan, an extended warranty of 2 years offered for the cell... It should be pointed out that the model **POOLSQUAD AMPERO** provides, in addition, controlled production using an amperometric sensor. Thus equipped, the electrolyser produces the ideal quantity of chlorine for the greatest respect of both swimmers and equipment. A real alternative to colorimetry, amperometry has the advantage of being more environment-friendly and economical to use (no reagents). All these features combined place POOLSQUAD firmly in the forefront of high-end electrolyzers. A new sales tool has just been launched: ask for it!

Australian Swimming Pool and Spa Alliance

The **Swimming Pool and Spa Alliance (SPASA)** is a Not-For-Profit Australian organisation whose members include leading pool builders, manufacturers, suppliers, retailers, technical servicemen, subcontractors, installers, consultants and other allied trades, all of whom set themselves apart from the rest of the industry by setting standards of skill, workmanship and ethical business behaviour in the best interests of pool and spa owners. SPASA is also a Registered Training Organisation (RTO) that provides nationally accredited training and assessment to the entire swimming pool and spa industry. The Organisation recognises the importance of supporting its members as well as the broader swimming pool and spa industry. It also recognises the importance of supporting all industry expos. These events provide enormous opportunity to all exhibitors and attendees; selling products, networking and education are just a few examples. The Swimming Pool and Spa Alliance (SPASA) wishes all Australian companies the very best success at the upcoming Piscine SPLASH! Asia Expo and would like to encourage all attendees to stop by their stands and say G'Day.

Chlorine On Board Integrated Automation, a new technology

AQUATRON has developed a chlorine generator designed to be installed inside robotic pool cleaners. The name for this technology is **COBIA™** (Chlorine On Board Integrated Automation). The system produces chlorine directly in the swimming pool while the cleaner is in operation. COBIA™ is more cost-effective than traditional in-line chlorinators installed in the circulating pipework of a pool because it works even when the pump and filtration system are not functioning.

New range of LED lighting

Propulsion Systems presents its Spectravision lighting line: sub-aquatic **ADAGIO+** LED lighting for illuminating ponds, pools and spas with confidence. The Adagio+ has a durable frame for underwater lighting, with 50 times greater longevity, low power consumption, and a very wide beam. Whether you're using white or RGB projectors, installation is extremely simple into a 1.5" slot. The electrical connection via 2 wires using the standard voltage of 12V AC is very simple. Depending on the type of pool basin and its finish, there are 5 different plastic or RVS fronts available. They're available in 8 different colours, depending on the colour of the pool walls. For mosaic pools, an assortment of ultra-thin fronts is available for an impeccable finish. The 170mm diameter Adagio+ is also suitable for renovation projects looking to replace PAR56 incandescent bulbs with an LED solution. This lighting is available in 2 sizes (100mm and 170mm) in white and in colour.

Waves make a ripple in public pools

WOW Company has equipped hotel health clubs, aquatic parks, public swimming pools and fitness centres with a total, to this date, of 300 **Wave Balls** in over 40 countries... This floating polyester sphere generates safe and controlled standing waves, creating an artificial and reassuring swell that is ideal for children. The Wave Ball features various programmes, from a slow and relaxing mode to a more dynamic option, giving bathers the opportunity to climb on the ball for a thrilling aquatic rodeo ride. Pools that have chosen this entertaining equipment have seen their popularity boosted (30 to 50% increase in visitor numbers, according to WOW Company). The ball may be personalized, integrated into an existing pool or in a facility created especially to emphasize the concept. It adapts to all types of pools, requires no particular maintenance and is energy-efficient (the largest model operates with less than 4kW).

Panorama for Tylo

Tylo's Design Line is a series of products consisting of four brand new sauna designs. Each one is a style in its own right, ready to be used. Customers can choose a bespoke size – or use the standard sizes. Described by the company as chic and beautifully designed, Panorama features a combination of materials and style designed to create a continuous flow of new angles and perspectives. The discreet soffit light bar illuminates down onto large, tinted panes of glass and horizontal tiger ash. The interior is clad in vertical aspen panels. The three or four levels of elegantly overlapping benches are also made of aspen.

SEAL
POOL EQUIPMENT

The professional Pulit Advance robot is evolving

Pulit Advance+, the newest addition to the Pulit Advance range of **Astralpool**, incorporates the very latest technological innovations to give a professional clean to private pools. So, the range now consists in 4 models: Pulit Advance+ 3 which cleans the pool's floor and cove; Pulit Advance+ 5 for pool's floor, cove, walls and water line; Pulit Advance+ 7 with its remote control, for pool's floor, cove, walls and water line and Pulit Advance+ 7 DUO which cleans the pool's floor, cove, walls and water line, has a remote control and two traction motors. This new "+" model combines maximum efficiency in the toughest working conditions with straightforward, intuitive settings. A display light flashes when the filters are almost full, then access to filters is easily made by the top whilst its design avoids all contact with dirt. Thanks to its height adjustable suction nozzles the robot can be used in any pool and will always give a top performance. Furthermore, Pulit Advance+ removes all dirt in record time thanks to its Aquasmart system, a patented algorithm for covering the greatest distance in the shortest possible time. Three active different cleaning programs can be selected as well as the choice of pool shape. In addition, Pulit Advance+ 7 and Pulit Advance+ DUO come with a built-in timer, even if the whole range is compatible with any external timer. They all are equipped with an advanced swivel system and an obstacle detector. New ergonomic caddy for models 5 and 7.

info@astralpool.com / www.astralpool.com

Multiple filtration monoblocs- it's possible and useful!

The **FILTRINOV** team has already equipped many pools with scalable mono-block filter units. Practical, very easy to install, widely used for renovation projects, they can save valuable time for professional installers. In concrete terms, they do not require a machine room, pipes will have to be closed off and the waterproofing of the pool remains intact for renovation, unlike pools fitted with sealed elements, where precautions have to be taken for this operation. The demand is growing for the installation of multiple filtering mono-blocks for large pools exceeding 12m x 6m. The advantage is evident, besides the obvious savings: the water is circulated by double suction on the sides, while a central discharge port prevents any inert area. Thus, for pools with an average depth of 2 m or less, the entire water volume is filtered through multiple devices positioned according to the advice of FILTRINOV's engineers. Several projects have been carried out with this system with great success in France, Sierra Leone, Vietnam, Malaysia, etc. These required shorter on-site work time, with no unpleasant surprises and better prices. Several projects are currently under way to equip large pools that are either being constructed or renovated.

info@filtrinov.com / www.filtrinov.com

Spa 395 the most comfortable new Hydropool spa

The range of **Hydropool** «self-cleaning» spas is expanding again with the arrival of the **395 model**. This spa with 3 wide seats and a resting seat includes an ergonomic berth

and the new «S-shape» berth with its full head-to-foot body massage. Its patented «self-cleaning» system provides independent filtration that cleanses the entire volume of water every 15 minutes, clearing deposits both at the bottom and on the water surface. This compact model, very well equipped for its size, is resolutely designed for comfort. In fact, with its «Intelligent Massage» system, it offers its users an effective therapeutic massage, thanks to the well-studied positioning of the hydrotherapy massage jets. Its high-speed Volcano jet, in particular, provides deep massage to soothe and relax the muscles of the lower limbs.

The features of this model are a preview of the latest technical advances that will be standard equipment for the entire range of future Hydropool «self-cleaning» spas, namely, a new filter jet, placed opposite the skimmer to drive out dirt and optimize filtration, cushions redesigned for greater comfort, and finally, a new design for the blower jets that are even more efficient. Like all Hydropool spas, its energy consumption is very low thanks to the «green» technologies used.

cnoslier@hydropoolhottubs.com / www.hydropoolhottubs.com

The second generation of Pool Rover Jet

Aqua Products is introducing for the incoming season a totally redesigned cleaner **Pool Rover Jet** for more efficient cleaning. Based on the successful Pool Rover Jet, this second generation unit features a modern design with emphasis on ergonomics, adjustable suction ports, a double shaft pump and a totally redesigned switching power supply.

Emaux SMG série gel-coat Filter

Gel-coat Filter Tank has been well-received by the industry due to the durability, trustworthy performance and smooth gel-coat fibreglass finish. With UV-resistant and non-corrosive material used, it is able to operate under prolong sunlight for years of reliability. SMG side mount filters series available with 4 different sizes, SMG500, SMG650, SMG750 and SMG900, allow a maximum flow rate from 167 lpm to 531 lpm. SMG series filters are equipped with a six-position, side mount multi-port valve and ABS laterals. The air-lease valve design provides a reliable solution for removing air from the plumber. With the transparent lid, it allows a clear view of filter.

AngelEye Lifeguard System to detect and prevent drowning

AngelEye Lifeguard is an innovative high technology solution, to prevent drowning accidents in public pools. With this device, it is now possible to detect potentially dangerous situations in time so that lifeguards can intervene immediately. This system is easily installed in pools that exist, those in service or under construction. Installation is carried out in three steps.

AngelEye specialists study the site with the help of the site plan. Video cameras in specially designed casings are installed in the pool walls. The host computer is then set up and connected to the various detection and signaling systems. The system is then adjusted to the lighting conditions and the various parameters of the pool. Equipments that form part of the system (screens, handheld computers and LED panels...) allow surveillance personnel to respond quickly and effectively to save lives. For each incident detected, the images from the system are made available in compliance with the laws on data protection. In addition, AngelEye also provides after-sales service.

CONVENTION

2013

The **Swimming Pool and Spa Alliance (SPASA)** is launching the
SPASA CONVENTION

REGISTRATION

SPASA CONVENTION is the result of SPASA and its members sharing the same vision and strategy to deliver a national trade expo. The Convention will feature educational workshops and provide a platform to network with professionals across the entire pool and spa industry.

Why attend the SPASA CONVENTION?

- See the industry's most respected exhibitors
- Talk with manufacturers and suppliers of the latest and most innovative products
- Attend educational seminars taught by leading industry experts
- Take advantage of the multiple networking opportunities to help your business grow and prosper
- Access expo specials on products and services
- Participate in the SPASA Olympics
- Win a trip for 2 to the largest swimming pool and spa trade expo in the world in LAS VEGAS

The SPASA Convention will be held at Sydney Olympic Park Aquatic Centre on the 15th August 2013

I/we are interested in attending:

Robot Pool Cleaners vs Manual – many benefits

Today many pools continue to be cleaned manually when technology allows cleaning efficiently, with much less disruption to customers, with big environment and economic benefits, thanks to **robot pool cleaners**. Some of the new innovations mean robots can now work in pools with beach Entries, sand Entries, Islands and poles or Biopools. Many robot cleaners are systematic as they have in built electronics, with sensors, logic and controls to enable them to navigate the pool or even to map the pool each time they are installed.

This means they provide superior coverage in comparison manually cleaning and they don't get stuck! And more, they supply brushing, scrubbing of the surface and strong suction power. They are more and more easy to use by simply placing them in the water and press on. No more hoses, floats and bumps, booster pumps!

Automatic pool cleaners are designed to turn off at the end of the cycle. Regarding the cost, compared to the average manual pool cleaner, a robotic one will generally payback well within 1 year, but in fact the payback will be less than 6 months. Perhaps one of the biggest benefits is that robots provide a substantial environment benefit for hotels. They save power as they operate and filter inside the pool being completely independent of the pools main filtration system. So the water is filtered IN the pool and doesn't have to be pumped through piping.

Independent studies by Electrical Companies have shown that annual savings can be around \$300 per year for domestic pools and in the thousand per year for commercial pools. Robots also save water by removing the debris from the system. Thereby the main pool filter unit doesn't become clogged as quickly, which results in fewer backwashes (30% less). And last but not least, they enable to save chemicals by removing with debris the skin cells and other organic matter, reducing the need in chemicals load. In summary, robot pool cleaners lead to the saving of power, water, chemicals, in other words money! As a bonus they have a superior cleaning ability than manual ones, and won't disturb the guests!

office@maytronics.com.au / www.maytronics.com.au

CCEI : LED Lightings for all swimming-pools

Chroma

Gaia

Since 1973, **CCEI** is leading manufacturer of electrical equipment for swimming pools. Its R&D department designs smart products according to real needs. For this next 2013, CCEI has extended its PAR56 range with new models. With its latest innovations CCEI covers all needs in lighting: starting from the smallest private basin to the biggest public pools. With only 20W of consumption, the model **WEM20** produces up to 1450 lm, just the necessary power to illuminate a small basin. For the first time in LED, CCEI has brought to you the most powerful LED bulb ever created; 8000lm for a greater comfort for big pools. The company has designed two new floodlights for standard niches: **Chroma and Nova**. Both are ideal for built-in swimming pools. The Nova offers a stainless steel flange, and the Chroma offers an easily removable flange that can be easily adapted to the color of your choice. For new constructions, **Gaia and Cilia** are surely one of the best options to take into account. Both of them are installed by screwing them in a 1.5" outlet. Here is a step forward to the lighting installation without niche.

contact@ccei.fr / www.ccei.fr

The eco-innovation rewarded: JUSTSALT® PRO

Saltwater chlorination is probably the most gentle and effective treatment for a private swimming pool.

For bather comfort and protection, it is essential to maintain chlorine and pH levels at an ideal constant.

JUSTSALT® PRO removes any risk of over-chlorination or lack of chlorine.

It provides three functions: effective disinfection by saltwater chlorination, smart pH regulation and auto adaptive production of chlorine thanks to a redox probe.

Thanks to a probe and advanced electronics specially conceived for saltwater chlorination, this adaptive system is the result of four years of development.

The result is perfectly clear water, protected equipment (components, bubble cover, shelter ...) and a life of the electrolysis cell significantly longer (warranty four years). Of course, this system is equipped with all the features that have made the success of the range JUST.

contact@pool-technologie.fr / www.pool-technologie.com

Free App "PoolM8" for a balanced water

As experts in water analysis the **Lovibond®** team is keen to educate on the importance of balanced water. The balance of the water is calculated by a formula (Langelier Index) giving a single number which indicates if the sample is corrosive or scale forming. For instance, a result of "0" means the water is "in balance". Ideally a slightly positive value is required. The Index is very reliable. The formula, however, can be complex to calculate (pH value, temperature, alkalinity-m, calcium hardness and TDS (Total Dissolved Solids) - often leading to errors in determining the exact value. The Lovibond® team has now solved this problem with its free, easy-to-use App "**PoolM8**" available on iTunes.

sales@tintometer.de / www.lovibond.com

Hugo Lahme takes the next step towards making your pool brighter and more user-friendly

Hugo Lahme GmbH, a top-quality swimming-pool system and equipment manufacturer, presents the next generation of its VitaLight® POWER LED underwater floodlights. The new range of **POWER LED 2.0** floodlights features numerous "Made in Germany" innovations and will replace the reliable and sought-after first generation of premium floodlights from Ennepetal. Thanks to the smart DC Powerline technology, RGB floodlights will henceforth also be operated using the two-wire technique, as is already the case with monochrome versions, which immensely facilitates cable installation. The new POWER LEDs are also setting new benchmarks in terms of light output and brightness. They are up to 50 percent brighter, with almost the same power consumption rate as monochrome VitaLight® underwater floodlights, whereas the RGB variants, with their yet clearer and more brilliant colours, offer more impressive colour design for swimming pools. Moreover, Generation 2.0 now exists in an ever-increasing variety of designs, because both the tried and tested round stainless steel panels and high-quality rectangular V4A stainless steel panels (1.4404/1.4571) are available for all POWER LED floodlights. VitaLight® POWER LED underwater floodlights are, of course, suitable for all standard installation recesses and swimming pool types so that existing systems can be retrofitted without problems.

Eco Select brand by Pentair-eco-friendly equipment for pools and spas

Pentair Aquatic Systems® announces that IntelliFlo® Variable Speed Pumps, IntelliFlo VF pumps, IntelliFlo VS+SVRS pumps have been certified by **ENERGY STAR®** (US Energy Performance Rating System) and will carry the recognized ENERGY STAR label. This is the first step taken into the Eco-Energy Initiative program set-up by Pentair. The company also submitted its IntelliFlo Variable Speed Pump for Singapore Green Building Council (SGBC) certification too. For consumers, this is important news as by using ENERGY STAR® and green certified products, they are doing their part to protect the environment but also save money on their utility bills. Jeff Farlow, Pentair's Program Manager of Energy Initiatives explains that "upgrading to an IntelliFlo Variable Speed Pump can save more energy than you'd save by upgrading all other household appliances

to energy efficient models". That's because these pumps have ultra-efficient permanent magnet motors reducing noise and vibration for greater efficiency and longer pump life. Plus, their totally enclosed fan-cooled (TEFC) motor design and their ability to operate at low speed make IntelliFlo pumps among the quietest available. Moreover, those Variable speed pump models from 1-3 HP also allow accommodating virtually any pool plumbing application.

Sophie.Bedu@pentair.com / www.pentairpool.com

Top of the range chlorinators

SEAL Pool Equipment is a family owned company, founded in Brisbane, Australia, with a European office for the distribution in Europe and the Middle East. With over 25 years' experience in the pool industry, its joint owner and Engineering Director specialised in the design and manufacturing of top of the range chlorinators and other swimming pool equipment. The company first launched its popular range of salt water chlorinators, the CL series for residential facilities. They have also recently developed the **SEAL Pup**, a chlorinator for small pools and spas. Reverse polarity, low salt and water flow alarms, manual and automatic settings, electrode monitoring are some of the common features to all its chlorinators. By using cutting edge technology, together with quality material, the Australian manufacturer always wants to ensure that its customers benefit from the best products with original design, great performance and reliability, all at affordable prices. The process requires the pool or spa to have a salt concentration of between 3 and 6 g/l. This is still classified as fresh water (by comparison sea water contains 20 g/l of salt on average). As the pool water passes between the chlorinator's plates, the electrolysis takes place. The SEAL chlorinator converts the chlorine in the salt (Sodium Chloride) into "chlorine". This production of "chlorine" is released in a safe and controlled way. The "chlorine" is used to disinfect the pool and, in doing so, returns to salt in the process. This process is continually repeated therefore recycling the salt. The benefits are clear as there is no need any more of expensive packaged chlorine, shock treatments or algacides, no more exposure to chlorine powders and dangerous storage, no more red eyes, green hair, dry irritated skin or smell of chlorine and the system is easy to operate.

The best of technology, respecting the nature and the environment | Our innovations were awarded several times

2010 > POOLSQUAD
2012 > JUSTSALT PRO

MINISALT®
-> Saltwater chlorinator

JUSTSALT®
-> Salt pH chlorinator

POOLSQUAD®
-> Fully automatic chlorinator

MINISALT®, JUSTSALT®, POOLSQUAD®, these saltwater chlorinators combine technology and reliability, ergonomics and quality. We propose a wide choice of products for the convenience of the professionals.

And because innovation must be comprehensive, our efforts are part of a sustainable development: they are respectful of the bather and the environment but also economical to use. Our awards received during the last two editions of the Lyon trade show, recognizes our products as eco-innovatives.

STEP refreshes with a single tap

Eichenwald offers a novel shower—**STEP**. The name is the program. Tapping the floor plate once readily activates the shower head. Turnon/turnoff by hand is so yesterday. STEP serves as the shower of the "touchscreen generation". All good things come from above? Not so with STEP. Instead, the water rises from below. In stairstep fashion, the plume of water rises toward the sun, a spectacle that lifts one's spirit. Those of a more sedentary persuasion simply lower the water pressure by way of the knurled-head screw. The height of the water jet instantly responds to its desired setting. Whether just rinsing off the feet or indulging in all-body refreshment—STEP faithfully follows its owner's commands. The novel shower from Eichenwald is ready for immediate use since it is hooked up through a common Gardena connector system.

An elaborate countercurrent system by uwe JetStream

With **BAMBO2**, **uwe JetStream** has developed a countercurrent system which convinces technically and optically. The shapely front cover is made of highest grade stainless steel with mirror polish and attracts with a timeless and noble design.

Powerful swimming or a gentle massage – BAMBO2 can be adjusted to the individual needs. Even a sportive swimmer will start to sweat when swimming against BAMBO2 with the powerful 3.5kW uwe JetStream pump.

Both swivel nozzles will be activated at a press on a button and will move up to 21l/sec (75m³/h). But BAMBO2 can go softer, too. The flow rate can be adjusted step less and individually per side by turning the flow control button right of the nozzle. Furthermore, air can also be mixed step less per side with the button left of the nozzle and converts the powerful stream into a strong bubble massage bath or a soft counter current.

OKU Obermaier harnesses the power of the sun

Don't do things by halves - a motto that could very well be applied to the project of **OKU Obermaier GmbH** in La Paz, capital of the Mexican State of Baja California Sur. This is where the specialist in swimming pool and solar technology from Geretsried has sold its largest solar heating system to date. In May 2012, an indoor swimming pool spanning 3,600 square metres, 2,000 square metres of solar panels were installed. OKU thus harnessed the free heat of the sun, which in La Paz is present even in winter, for the benefit of the pool's users.

DSF: swimming pool control system with internet connection and power-saving function

The company **osf** Hansjürgen stands out thanks to the new swimming pool control system "**EUROMATIK.net**" with integrated web server. It allows easy connection with a computer, a computer network and the internet. Therefore, the swimming pool system can be conveniently and safely controlled from any location, via a computer, tablet PC or Smartphone. A multi-level password protection offers the swimming pool owner the best possible security for his top-quality system. In case of fault, EUROMATIK.net automatically sends out an e-mail informing the recipient about the current situation. The novelty from osf also stores an operation log which can be read directly on the system or via the internet. This log can be downloaded in different formats, to be processed further on the PC. EUROMATIK.net is very user-friendly and can be configured individually on site. Another special feature is the external control unit for wall mounting, which also comes with a touchscreen monitor. In addition to the integrated level controller, which can be used for skimmer pools or standard pools with overflow channel, the control system also has a backflow controller for 6-way valves and stem valves. EUROMATIK.net is an "all-rounder" because apart from the swimming pool cover, it can also control solar or heat pumps. Moreover, it has an anti-freeze function.

Tradition, experience and 100 years of innovation

Speck Pumpen is a leading international manufacturer of high quality pumps and accessories for commercial and residential pools, spas, jetted bath tubs and industrial applications. For 100 years the Speck Pumpen has provided innovative, customized and market specified products. Since 1909, the German company has maintained its excellent reputation as an industrial enterprise by sheer ingenuity and business acumen.

During the early 60s, swimming pool technology became one of the company's central topics and the specialized **BADU**® range was developed. In this area it continues to invest and strive to identify its customers' needs and the high expectations of pool owners. Its innovative and pioneering spirit, consistent high quality, extensive product range, energy-saving technology and recognizable design has cemented the trademark **BADU**® as an international benchmark in swimming pool technology.

High quality water attractions made in Germany

The **wiegand.maelzer GmbH** offers a wide range of waterslides and many other water attractions made of stainless steel and GRP 5 (Glass fiber resin Products) with the well-known "made in Germany" quality standard. What started out as a small family venture became during the past years a worldwide acknowledged producer of water attractions, with more than 200 employees in total. Thanks to its wide product range the company is able to supply any water park project with attractions specially planned and produced for its requirements. Most of its products are hand-produced in Germany according to the strict German quality standards to ensure high durability and maximum safety. Besides the production of water attractions the firm also offers complete project planning services from the very beginning of the project up to its turn-key development. Since 2006 it has been delivering its high-quality products for the most visited indoor and outdoor water parks worldwide. Among its most successful projects are the Therme Erding, Area47, Tropical Island and many more. The company currently delivers 15 attractions for the Minsk Aquapark, which will be the biggest European water park ever built.

GRANDO GMBH: Stable without "plugs"

grando swimming pool covers are sealed through a special three-layer, air-and-water-tight sealing procedure. Therefore, they hold for a long time and can adapt perfectly to any pool form. The profiles of a swimming pool roller shutter cover must be locked to prevent water from entering the pool. The standard market practice is to machine-fit the profile with a plug. At grando, a special three-layer seal is used, which is manually applied by qualified experts. Applying the filler several times makes the roller shutter cover to remain absolutely watertight even after being used for several years. The sealing procedure with a high level of manual work has another advantage: each cover is an individual piece, produced individually in precision work, and can adapt perfectly to any pool form. At grando only long-lasting and robust materials, such as special plastics and stainless steel are used. grando roller shutters are masterpieces, and not mass-produced goods.

BAYROL launches a new range of whirlpool care products

"SpaTime by BAYROL" is the name of the special range of whirlpool care products from the company BAYROL. The SpaTime maintenance concept contains a new product in addition to the standard products: the weekly basic disinfection with SpaTime "Wasser-Rein" (water purifier). "Wasser-Rein" is a pre-proportioned pellet in a bag, with a novel special recipe, which guarantees basic whirlpool water disinfection. It thus offers a basis for water purification, regardless of how often the whirlpool is used, and prevents disinfection gaps. Moreover, "Wasser-Rein" destroys chloramine which is responsible for chlorine odour and eye irritations. "Wasser-Rein" is compatible with any disinfectant used: chlorine, bromine or chlorine-free active oxygen. The new SpaTime maintenance concept also includes a practical service plan which clearly shows the maintenance steps to take at any time. The attractive label design, specially tailored to the package, gives at a glance all the information needed by the whirlpool owner. "SpaTime by BAYROL" is also breaking new grounds for whirlpool sets. Instead of prefabricated sets, which only contain a part of the necessary care products, it is possible for the whirlpool owner to put together a "personal whirlpool set".

bayrol@bayrol.de / www.bayrol.de

Schmalenberger chooses a strong material for a gentle massage

Schmalenberger has used **cobra** fibre to develop a splash shower, on which all stressed areas are reinforced with carbon. The innovative material, appreciated in the aerospace and automobile industries due to its high stability and rigidity, is known in the swimming pool sector as long-lasting and corrosion-resistant. The carbon used by Schmalenberger is

specially designed for use in salt water and mineral baths. Thanks to this cutting-edge technology, Schmalenberger is offering a corrosion-resistant alternative to stainless steel parts. Cobra fibre has made nature its role model. Water splashes softly on the shoulders just like in a waterfall. Without spraying, cobra fibre delights bathers with a soft but effective massage. The new Schmalenberger splash shower is not only good for body and soul. It is also good-looking. Available in different colours, 80 cm high and 50 cm wide, it fits perfectly into any wellness area and adapts easily and elegantly to any architectural situation. Cobra fibre is tailored to the reliable, rio-series, fluvo installation kits and the corresponding attraction pumps. They guarantee error-free, perfect and speedy installation

A leader in swimming pool linings

ELBTAL PLASTICS GMBH & CO. KG

(Germany) has been manufacturing all types of high-quality PVC sheets for customers all over the world since 1956, adapting its manufacturing to the needs of its customers. Elbtal, a member of the KAP Corporation which is active worldwide, has one of the most modern pressing lines in Europe. Its R+D Department, its ultra-modern laboratory and the ISO 9001 quality certificate ensure the highest quality standards. One of its main activities is the production of reinforced sheets and liners for swimming pools which are free of heavy materials and physiologically harmless for the environment according to the EN 71 / 3 standard. Throughout the process of production of the ELBE blue line, the quality of the raw materials is checked as they are received in compliance with the specifications indicated. For ELBTAL PLASTICS GMBH & CO.KG, health and well-being are the most important factors. **ELBEblue line** reinforced swimming pool linings are particularly suitable for the renovation of existing pool or new constructions. The membranes are loose laid and then hot-air welded along the seams. They can be installed on various substructures, such as concrete pools, PP-Pools, steel segment pools, plastic stripping segment pools or simply to renovate tiled pools. They are applied for public pools, pools in leisure centres, hotel pools and exclusive private pools. The reinforced swimming pool membranes are perfect for the lining of immovable basins of various sizes and forms in both indoor and outdoor.

Behncke Control 1.2: individual and online control

Control is good, but **Control 1.2** is better. The microprocessor-based swimming pool control system **Behncke Control 1.2**, featuring a functional userinterface, a large digital display, online functions and a water filler, meets all the requirements for private swimming pool technology. It is compatible with both a 230 V and 400 V connection. Control 1.2 can either be operated directly on the device or conveniently in digital mode. The owner logs on with his personal login data to the Behncke website and can view, control and use all functions and applications online. Individuality is a top priority at Behncke. Control 1.2 allows an external frequency converter or a pump with frequency converter to be connected. Moreover, dosing pumps (flocculation ACO, APF, No Phos), with freely programmable impulse or time control, can be connected without problems. Behncke Control 1.2 is currently available in the three full program versions - German, English and French. Other language versions are being developed. Behncke Control 1.2 offers a variety of programming possibilities and stands out thanks to a clear and simple menu layout.

Kokido presents its newest electric vacuum cleaner for swimming pools and spas

Kokido presents its newest electric vacuum cleaner for swimming pools and spas, **Vektro™**. It works underwater with powerful suction that eliminates sand, gravel and other debris from the bottom of the pool or spa. No hoses or electrical cords are needed thanks to its vacuum pump, which is powered by a rechargeable battery, creates suction. It operates both as a handheld for spot cleaning or small stairs, or attached to a standard telescopic pole (not included) for pool floor cleaning. Installation is simple, with no tools required. It has a large 1.5L capacity debris collection canister with see-through body to see when full. Its underside brushes scrub away sand and dirt from the pool floor. Its quick drain system returns filtered water to pool and it works with easy gliding thanks to its rotational ball wheels. Vektro™ is delivered with an AC transformer and a quick connect docking station for recharging

Biodesign is growing fast

Biodesign offers patented swimming pool construction technology that allows you to customise every single detail of a pool, while respecting the environment at the same time. The company aims to create a network of agents who will specialise in the sale, installation and maintenance of Biodesign swimming pools for both private and public users. This network will consist of business units whose relationship with the parent company will be governed by exclusive long-term contracts.

The project is backed by carefully organised support through a training programme that covers all aspects from end-to-end installation, design, sales systems, and advice on business management with the help of specific operating manuals. Further collaboration is planned for a small number of affiliates-franchisees who could then directly manage a second level network under a production unit contract. All levels of the network will participate in the operation of the company, which in turn will help its partners to develop in a sustainable and profitable manner.

Pool Blaster PRO 1500 fully autonomous

The newly released **Pool Blaster PRO 1500** offers two snap in/out re-chargeable battery packs, wall charger, and quick-release pole connector, three re-usable filter bags (mesh, sand and silt and micro filter). It can quickly vacuum large debris as large as golf balls and filter small dirt with its included micro filter bags.

In addition, the PRO 1500 features great utility with its newly engineered omni-directional vacuum head adapter and industrial quality 19" wide, weighted vacuum head.

This new combination enables maintenance personnel to vacuum pools, fountains and other water features quickly and efficiently. Each battery pack provides up to an hour and a half of run time, giving the PRO 1500 up to three hours of vacuuming at a time.

Wibit re-invents the playground... and it's on the water!

With the new **FlatTop™** Technology **Wibit** once again ventures into new waters – the unique double-wall construction has an extremely low-profile and a virtually flat surface. With this new innovation in inflatable water sports products THE German water sports company sets new standards but remains true to its principals when it comes to design, quality and safety. Thanks to its new Wiggle Bridge, walking on water is now possible... crossing this shaky bridge is a real challenge to the balance! Simply add the Sled, Hurdle, Target Cube and Wibit Hand to create the most unique and exciting floating playground for pools – the AquaCircuit!

This action-packed circuit makes animation easy and brings fun and excitement to any pool! Wibit products are certified by the German TÜV, which consists of world-renowned safety testers of industrial materials since 1876. As an international safety service company, the TÜV sets standards and documents the safety and quality of new and existing products, systems and services.

Waves in your private pool? Yes we can

For more than 25 years now, **WOW Company** is well known for its Wave Ball, a waves generator for public pools, aquaparks, training and rescue centres. Today, the same company, makes waves accessible to all existing and new private pools thanks to **Wave It**.

The product works by air injection and benefits of WOW Company technology and know how to generate bubbles and waves in the pool.

With the first air injection, Wave it generates a wave which spreads through the pool; once reflected by the pool's walls, the wave comes back to the injection point, where another air injection amplifies it and so on. Wave's amplitude is regulated by an integrated computer system linked to pressure sensors placed with the injectors, which defines the right moment to inject air in order to create new waves and regulate their amplitude. Since 2006 Wave It has been awarded for innovation in many international trade fairs.

UK Pool & Spa Show organisers claim 40% of 2014 stand space confirmed

The organisers of the UK Pool & Spa Expo have announced that early forecasts for their 2014 event have surpassed expectations. New Events director Rob Saunders commented: "We knew the formula was right for 2013 and were encouraged with the support we received from industry in year one; this has continued for our 2014 event. With over 40% of space confirmed and the return of popular exhibitor features like free lifting in-hall, carpet for all stands, controlled additional service costs, free wi-fi, free parking for everyone and complimentary refreshments, things are going in the right direction. Keep in touch to see what other exciting plans we have for 2014." He adds: "2014 will showcase the latest technologies in pools and spas, sauna, steam and wellness. Alongside a huge array of products will be seminars and our international 'meet the buyer' programme". The UK Pool & Spa Expo 2014 runs from 20 to 22 February 2014 at the NEC, Birmingham.

Aquanale 2013 registration off to a flying start

The organisers of Aquanale 2013, the international sauna, swimming pool and well-being exhibition being held in Cologne later in 2013, report that a large number of major players in the sector have already registered eight months before the show. Nearly 350 companies from over 25 countries are expected from 22nd to 25th October. For the first time, Aquanale will be held exactly at the same time as the FSB, the international exhibition for wellbeing equipment, sports centres and public swimming pools. The pool sections of the two exhibitions have therefore been combined in halls 10.01. and 10.02. Thanks to the direct link between public pools and private swimming pools and wellbeing spaces, the new concept offers synergies that will benefit both exhibitors and visitors. The fifth Cologne forum for pools and wellbeing spaces being held concurrently will cover topics such as the modification of DIN 19643, Web 2.0 for operators of public pools, natural swimming pools and swimming ponds. The new forum on pool building will take place on 22nd October, dedicated to pool architecture, especially public pools. For the first time, the European Union of Swimming Pool and Spa Associations (EUSA) will be awarding an International European Pool Award, the ceremony for which will take place on 24th October at the exhibition.

QPS (Qatar Pools and Spas show) comes back in November

Exhibitions and conferences, organizer Heights with the support of Watermaster Qatar as sponsor and the partnership of the Qatar Civil Defense Department, has announce the launch of the 2nd International Exhibition and conference for Swimming Pools and Spas, which is to be held from November 6-8 at the Doha International Exhibition Center. The announcement was made by senior officials of the Partners, who included Civil Defense Department's Prevention Division director Brigadier Ibrahim al Muf-tah, Heights Exhibition & Conferences chief executive Waleed Wahba, Watermaster Holding chairman Khalil Boueri, and Investment Holding Group chief executive Wael Shtayeh. As per today over 85 percent of the companies that took part in the 2012 edition have confirmed participation in this year's edition, according to Heights CEO Waleed Wahba. Professionals from around the world are to showcase their most recent technologies and experiences in the pool and Spa industry, with features related to water treatment, security pool covers, fountains, backyards equipment, landscaping, public pools and aqua parks. Heights Exhibitions and Conferences presented its warm words of thanks to all QPS 2013 Sponsors ; Watermaster Qatar - Main Sponsor, Metro Pools - Premium Sponsor, Civil Defense Department - Official Sponsor, and EuroSpaPoolNews - Media Partner.

SPATEX 2014 is your gateway to the UK pool and spa industry!

Now entering its 18th year, THE UK pool and spa industry's premier Exhibition, SPATEX 2014 attracts a high quality of exhibitors and visitors, as you would expect from this kind of show. For three days (Sunday February 2nd to Tuesday February 4th) the decision makers of the industry will be gathered. Technical workshops and a dedicated Leisure Operator's Day are included in the Show and networking mix. The resounding success of SPATEX 2013 will be repeated and perhaps surpassed in 2014 when the Show moves to its new Midlands location at the Ricoh Arena. It offers quick and easy access to major road networks and Birmingham airport is just a short drive away. Make sure you and your business are seen and heard at SPATEX 2014. Visitor registration is open and you can fill in the simple online form and sign up for the newsletter.

Piscina Barcelona: synergy between all water-related markets

Piscina Barcelona, Wellness Barcelona and Leisure and Sports Facilities will be the three areas that will be featured in exhibits at the event, from October 15th to 18th 2013. This 11th edition will also host the Wellness & Spa Experiences Event, a congress that will bring together international wellness experts. Moreover, Piscina Barcelona will coincide with Body Life, a show dedicated to fitness equipment. In 2011, Piscina was attended by 19,000 trade visitors, 45% of them foreign from 127 countries, such as France, Italy, UK, Sweden, Israel, Turkey, Russia, Germany, USA and Brazil. According to the show's director Isabel Piñol: "Piscina Barcelona has evolved into a show that integrates all water-related markets, such as residential swimming pools, wellness and sports and recreational aquatic facilities, under a brand new concept: Barcelona International Aquatic Exhibition." Since its first show in 1994, Piscina Barcelona has contributed to boosting one of the country's most solid markets: with a stock of over 1.1 million private family swimming pools, Spain accounts for 7% of the world market, being fourth in the ranking of total number of pools on the planet and second in Europe. Innovation and sustainability will be the stakes of the Show, with three basic elements: maximum energy efficiency, use of eco-smart materials and optimal integration of the surroundings. In order to ratify its commitment to sustainability the show has moreover created the Piscina Barcelona Awards awarding two of the best innovative initiatives that guarantee sustainability in the fields of swimming pools, wellness and sports and recreational aquatic facilities will receive an award.
